PROFESSIONAL LED LIGHTING

PRODUCT GUIDE 2023

Televés[®]

CIES

**ECOLOGICAL LIGHTS MADE
OF TECHNICAL POLYMER
INVULNERABLE EVERYWHERE**

Excellent performance, inside and out:

- ✓ Efficient and practical in extreme conditions
- ✓ Respectful of the environment and the quality of the night sky

100% made in Televés

CIES

**ECOLOGICAL LIGHTS MADE OF TECHNICAL POLYMER
INVULNERABLE EVERYWHERE**

CIES is the first series of luminaires manufactured in technical polymers specially formulated by Televes, combining design, mechanical and materials engineering and the latest electronic technology to satisfy the most demanding customers.

This series provides a breakthrough solution in the lighting market, perfect for the most aggressive environments and optimizes operation, installation and maintenance.

Road and interurban lighting

Maritime area lighting

Remote management:
N Series | Z Series

ATMOSLED

INTERURBAN ROAD LIGHTING AND FOR VARIOUS OUTDOOR AREAS

Highly versatile road luminaire adaptable to any outdoor environment, built in extruded anodised aluminium specially designed for perfect thermal management, optimised service life and resistance to aggressive environments.

Designed to increase energy savings and reduce maintenance costs thanks to its high efficiency and durability.

Road and interurban lighting

Remote management:
N Series | Z Series

LED LIGHTING RANGES

URBAN ALAMEDA | MAIA

LUMINAIRES WITH A FRESH STYLE TO ENHANCE LIGHTING
IN THE HEART OF CITIES

Decorative urban luminaire made of die-cast aluminium. The Urban series has a compact design with smooth geometric lines, which integrates harmoniously with the environment, making it perfect for urban and residential spaces.

It stands out for its easy installation and maintenance without the need of tools. In addition, its high-quality tempered glass protector favours visual comfort and reduces glare.

Urban and residential lighting

Remote management:
Z Series

VILLA | FERNANDINA LAMP

CLASSIC LUMINAIRES WITH GREAT HISTORICAL AND DECORATIVE
VALUE USING THE MOST MODERN LED TECHNOLOGY

Luminaires of great decorative and artistic value, combining a classic and traditional line with the most advanced and efficient LED technology.

Its design offers the opportunity to preserve the historical heritage, while obtaining a better lighting, responsible and adapted to the environment. Easy to install and maintain, it is ideal for historic and urban spaces as well as residential streets, squares or parks.

Ornamental lighting

PROFESSIONAL LED LIGHTING

LED LIGHTING RANGES

FLEX FLOODLIGHTS

HIGH-POWER MODULAR LIGHTING FOR PROFESSIONAL SPORTS FACILITIES AND LARGE AREAS

Flex floodlights combine excellent performance and high power in a practical modular format, up to 4 modules per bracket, optimizing resources. Thanks to their high efficiency, durability and ease of maintenance, excellent cost-effectiveness is achieved.

Its scalable design, from 1 to 4 modules on a single support and the different configurations per module (power, optics and number of LEDs), offer a range from 250 to 1200 W. A wide range of possibilities that makes Flex floodlights the right choice for any space.

Special facilities

Sports areas lighting

MAXI FLOODLIGHTS

LIGHTING FOR SPORTS FACILITIES AND LARGE AREAS

Floodlights are high performance luminaires with high power. They have the ability to direct the luminous flux at a specific angle with great precision, exposing only the area of interest to the illumination provided.

Maxi floodlights are specially designed to illuminate large sports surfaces, perfectly meeting the visual requirements necessary for sports practice, even for top-level competitions.

Sports areas lighting

LED LIGHTING RANGES

STANDARD FLOODLIGHTS

ILLUMINATION THAT ENHANCES THE BEAUTY OF CITIES THROUGH LIGHT

Standard floodlights are the perfect solution for ornamental, artistic or monumental lighting, where light acquires a highly aesthetic value. Their objective is to enhance the beauty of the objects to attract the public's attention, treating lighting as an art, through the correct management of lights, shadows, contrasts and colors.

The Standard floodlight combines its small size with great lighting performance, subtly blending into different landscapes and emphasizing objects of interest through an intensive beam of light of high quality and high efficiency.

Ornamental lighting

AROUSA

RUST-PROOF, VANDAL-PROOF PEDESTAL LIGHTS FOR PEDESTRIAN AND GARDEN AREAS

The Arousa pedestal light stands out for its high resistance and ability to remain unaltered in any environment, thanks to its high protection against impacts and its colorless anti-graffiti varnish coating. In addition, its high tightness and its stainless steel body also prevent the entry of water and oxidation. Arousa is a highly durable pedestal light, customizable in different aspects, such as performance, color and finish.

Available in two sizes.

Maritime area lighting

Path lighting

PROFESSIONAL LED LIGHTING

LED LIGHTING RANGES

INNERLED

LINEAR LUMINAIRE FOR RECTANGULAR ROOMS IN INDUSTRIAL AND PROFESSIONAL ENVIRONMENTS

High-performance, high-quality LED luminaire for indoor use. Made from extruded and anodised aluminium that increases its toughness, it is highly resistant to impact and corrosion, guaranteeing high durability.

The InnerLED structure favours thermal control of the driver and the LED module, making it suitable for intensive use without raising its temperature.

Thanks to its high efficiency and durability, InnerLED is an excellent solution for reducing energy consumption and maintenance costs, while offering impeccable lighting, creating more pleasant spaces with greater visual comfort.

Industrial lighting

Sports areas lighting

ZAR HIGH-BAY LAMP

UFO HIGH-BAY FOR OPEN SPACES IN INDUSTRIAL AND PROFESSIONAL ENVIRONMENTS

Indoor LED luminaire made of die-cast aluminum specially designed for perfect thermal management, optimized service life and high efficiency.

In industrial and professional environments it is important to have appropriate lighting levels that contribute to work safety, visual comfort and productivity. ZAR high-bay is a luminaire with great capacity to illuminate large spaces that require correct lighting, reaching the most demanding light quality levels (CRI > 80).

Industrial lighting

LED LIGHTING RANGES

RETROFIT

RENOVATION TO LED TECHNOLOGY WHILE PRESERVING THE ORIGINAL STRUCTURE OF THE LUMINAIRE

Retrofit is the direct replacement of old lighting technologies with newer, more efficient ones, using the previous installations. It is the perfect lighting solution for sustainable consumption, high efficiency and high performance.

Retrofit is a safe bet in favour of ecology, as it prioritises the minimisation of waste generated by taking advantage of existing structures. It also stands out for the low consumption of LED technology and its great durability, offering responsible lighting by controlling the light emitted to the upper hemisphere of the luminaire.

Lighting renovation

Ornamental lighting

Road and interurban lighting:

Roads with vehicular traffic, highways, high-speed roads, freeways, traffic circles, toll booths.

They are more specific for areas whose exclusive use is by vehicles.

Lighting of maritime areas:

Ports, docks, streets, promenades.

They are perfect for spaces frequented by pedestrians and vehicles in aggressive environments such as maritime environments.

Urban and residential lighting:

Urban areas, streets, promenades, parks, residential areas, housing estates.

They are perfect for areas frequented by pedestrians, but also by vehicles.

Ornamental lighting:

Monumental areas, historical areas, protected heritage, bridges, churches, walls.

Mainly ornamental use. They provide ambient lighting integrated with the decoration of the area and are also used to highlight objects through light and shadow.

Lighting of sports areas:

Sports areas such as sports centers, soccer fields, basketball courts, paddle and tennis courts, swimming pools...

Designed for areas where precise control and direction of light is crucial.

Path lighting:

Walks, paths, parks, gardens, hotels, terraces.

Bollards to orient and guide passersby, perfect for areas that demand ambient lighting to maintain visibility.

Industrial lighting:

Industrial sector, production plants, logistics warehouses.

For areas requiring strict conditions of safety, robustness and durability of luminaires.

Special facilities:

Marinas, loading docks, airports.

High reliability lighting for areas where it is critical to maintain proper illumination, ensuring visibility and safety of users.

Lighting renovation:

All types of public lighting.

It is used especially in areas where it is important to conserve the luminaires because of their historical value.

Remote management:

Public lighting for integration in the scope of a Smart City.

Devices and complements that give luminaires the ability to connect to a remote management and communication system with IoT structures.

REMOTE CONTROL NODES

Point-to-point connectivity of LED lighting systems has become a must in Smart City management due to the extension, complexity, and undeniable benefits it brings to the citizens.

The main advantages are:

- **System efficiency** increase, as sensorization allows the modification of intensity based on the population needs in each location, in a much more flexible way than pre-set timing schedules.
- Capacity to **control**, and therefore to adapt to instant lighting changes required in the city (level increase due to unscheduled causes such as events, patron saints' feasts, or emergency situations).
- Capacity to **monitor the network**, and therefore to early detect incidents, which opens the door to planning and efficiency in network operation and maintenance.

We have added, in several ranges of luminaires, the N and Z Series. These new series are equipped with regulation connectors, that allows establishing a Plug&Play connection with the remote control nodes, therefore providing connection to IoT infrastructures.

- **N Series:** ANSI C163.41 NEMA Standard
- **Z Series:** Zhaga book 18 Standard

This **open interface** allows the N and Z series luminaires to connect to any remote control system, irrespective of the technology used in each Smart City project, based both on the terrain and on the presence or not of other IoT networks in the city, or in the use cases and control to be implemented, which may be based on an electric line connection (PLC, wideband PLC) or on wireless networks (3G, NB-IoT, LoraWan, LoraMesh, Zigbee...).

- PLC:** Traditional electric power line transmission technology for communication signal transmission purposes. PLC takes advantage of the electricity grid to convert it into a high-speed digital line for data transmission.
- 3G:** The third generation of mobile telephony voice and data transmission using UMTS (*Universal Mobile Telecommunications System*).

- NB-IoT:** (NarrowBand IoT). First open, standard communication technology to connect the small objects of our everyday life to the Internet. This technology uses the mobile network (3G/4G/5G) to connect any object of our everyday life in an easy, safe and reliable way. Since it uses the communications network of a mobile operator, it provides better coverage levels both indoors and outdoors.
- LoRa:** Wireless technology that uses one type of radio frequency modulation.

DIMMING OR AUTONOMOUS LIGHTING CONTROL

Dimming or lighting control allows the regulation of each light point to the level supported by the lamp; in this case, 10 light levels.

This **STANDALONE SOLUTION** consists in a controller installed on each luminaire with a pre-programmed timing for each lamppost that specifies the light level required for each hour of the night.

This system increases components' operating life, thus reducing maintenance costs and helping to increase the energy savings associated with LED lighting.

By default, the dimming's lighting plan consists in two time slots with maximum lighting and an intermediate slot with lower lighting. The system adjusts to the on/off schedule specified on the control panel, so that maximum lighting level (100%) is provided during the busy hours (early in the morning and late at night), and is progressively reduced during quieter times (dawn), reaching a lighting level of 70%. Furthermore, dimming is readjusted to adapt to schedule changes according to the time of year.

Dimming is only available for the references specified in the annex.

WIDE SELECTION ON REQUEST::

At Televés we know that each situation requires specific lighting characteristics. Consequently, we have a wide variety of options available on demand to meet the needs of every context:

- Optics
- Colour temperature
- Chassis color
- Dimming
- Remote management
- CRI
- Operating temperature

We are at your disposal to answer any questions or to provide you with all the technical features and accessories compatible with our professional LED lighting ranges.

FLEX

High-power modular lighting
**FOR PROFESSIONAL SPORT VENUES
AND LARGE AREAS**

The new high-performance, high-power modular projectors are the perfect solution for lighting in large open spaces, such as sport venues and recreational areas, with maximum efficiency.

Their scalable design, from 1 to 4 modules on a single post, and the different possible module configurations (power, optics and no. of LEDs), offer a range from 250 to 1200 W.

A wide range of possibilities that make Flex projectors the right choice for any space.
