

TELEVES S.A.U. ENVIRONMENTAL PERFORMANCE

The surroundings in which Televes has developed have driven the company's ever-increasing concern for the environment; one of the reasons for the growth of that concern over the years has been an ever more demanding environmental legislation.

To prove that environmental ambition to the stakeholders, Televes' management team decides to implement and certify an Environmental Management System based on the ISO 14001:2015 standard.

Transition from ISO 9001:2008 - which has been implemented by the company and certified for years - to ISO 9001:2015, was also an occasion to integrate both systems into what we call the Integrated Management System.

In 2019, ISO 45001:2018 Occupational Health and Safety was added to this Integrated Management System.

QUALITY, ENVIRONMENT AND OCCUPATIONAL HEALTH AND SAFETY POLICY

The declaration of intent and principles in our organization related to environmental actions is established in our Quality, Environment and Occupational Health and Safety Policy.

The document is available to the stakeholders through the following link:

https://docs.televes.com/web/certificados/PO000103_GB.pdf

ENVIRONMENTAL ASPECTS

The process of identifying the environmental aspects and impact is thoroughly carried out for each of Televes S.A.U. activities, products and services from a life cycle perspective and taking into account normal, abnormal, and emergency operating conditions.

Among the environmental aspects identified and associated impacts are the ones listed below:

ENVIRONMENTAL ASPECT	ASSOCIATED IMPACT
Raw materials and resource consumption	Decrease in natural resources
Waste generation	Impact associated to waste recycling and visual impact derived from on-premise waste storage
Atmospheric emissions	Air quality alteration
Effluents	Soil and water resource pollution
Noise emissions	Inconvenience to workers and neighbours

The outcome of the assessment determines which aspects may have a significant impact on the environment, which therefore require action and need to be considered when establishing the annual environmental objectives.

LEGAL AND OTHER REQUIREMENTS

Televes has established a methodology for identifying, assessing, and recording the legal requirements that are applicable to the company's activity.

Revisions are periodically carried out to detect any new requirements that would involve appropriate corrective actions to ensure compliance.

ENVIRONMENTAL PERFORMANCE

The following aspects are considered in environmental performance assessment:

- Non-conformances and corrective actions
- Outcome of environmental measurement and follow-up indicators
- Level of compliance with legal and other requirements
- Outcome of internal and external audits
- Outcome of the scheduled tests for emergency preparation and response
- Actions derived from operational control

ENVIRONMENTAL OBJECTIVES

Based on the directives defined in our Quality, Environment and Occupational Health and Safety Policy, as well as the results of the evaluation of environmental aspects, two environmental objectives were defined for 2022.

OBJECTIVE 1

OBJECTIVE	Reducing environmental impact caused by the company's activities. Replacing products with less hazardous substances. Reducing waste generation.
GOAL	Eliminating thermal oil as a fluid to heat the tanks of the facilities where metal surfaces are treated.

OBJECTIVE 2

OBJECTIVE	Implementing the consumption of energy from a renewable source. Decreasing the environmental impact caused by our activities.
GOAL	Increasing our photovoltaic systems to generate 5% of the total energy consumed through a renewable energy source.
