

TELEVÉS S.A.U. ENVIRONMENTAL PERFORMANCE

The surroundings in which Televés has developed have driven the company's ever-increasing concern for the environment; one of the reasons for the growth of that concern over the years has been an ever more demanding environmental legislation.

To prove that environmental ambition to the stakeholders, Televés' management team decides to implement and certify an Environmental Management System based on the ISO 14001:2015 standard.

Transition from ISO 9001:2008 - which has been implemented by the company and certified for years - to ISO 9001:2015, was also an occasion to integrate both systems into what we call the Integrated Management System.

In 2019, standard ISO 45001:2018 on Occupational Health and Safety was included in this Integrated Management System. In 2022, the Energy Management System was also integrated in accordance with the guidelines in ISO 50001:2018.

QUALITY, ENVIRONMENT, ENERGY AND OCCUPATIONAL HEALTH AND SAFETY POLICY

The declaration of intent and principles in our organization related to environmental actions is established in our Quality, Environment, Energy and Occupational Health and Safety Policy.

The document is available to the stakeholders through the following link:

https://docs.televés.com/web/certificados/PO000104_GB.pdf

ENVIRONMENTAL ASPECTS

The process of identifying the environmental aspects and impact is thoroughly carried out for each of Televés S.A.U. activities, products and services from a life cycle perspective and taking into account normal, abnormal, and emergency operating conditions.

Among the environmental aspects identified and associated impacts are the ones listed below:

ENVIRONMENTAL ASPECT	ASSOCIATED IMPACT
Raw materials and resource consumption	Decrease in natural resources
Waste generation	Impact associated to waste recycling and visual impact derived from on-premise waste storage
Atmospheric emissions	Air quality alteration
Effluents	Soil and water resource pollution
Noise emissions	Inconvenience to workers and neighbours

The outcome of the assessment determines which aspects may have a significant impact on the environment, which therefore require action and need to be considered when establishing the annual environmental objectives.

LEGAL AND OTHER REQUIREMENTS

Televés has established a methodology for identifying, assessing, and recording the legal requirements that are applicable to the company's activity.

Revisions are periodically carried out to detect any new requirements that would involve appropriate corrective actions to ensure compliance.

ENVIRONMENTAL PERFORMANCE

The following aspects are considered in environmental performance assessment:

- Non-conformances and corrective actions
- Outcome of environmental measurement and follow-up indicators
- Level of compliance with legal and other requirements
- Outcome of internal and external audits
- Outcome of the scheduled tests for emergency preparation and response
- Actions derived from operational control

ENVIRONMENTAL OBJECTIVES

Based on the directives defined in our Quality, Environment, Energy and Occupational Health and Safety Policy, as well as the results of the evaluation of environmental aspects, four environmental objectives were defined for 2023.

OBJECTIVE 1

OBJECTIVE	Reducing environmental impact caused by the company's activities. Reduction in the consumption of chemical products. Reducing waste generation.
GOAL	Reducing by 10% the amount of alkaline residues generated in the antenna passivation facilities.

OBJECTIVE 2

OBJECTIVE	Implementing the consumption of energy from a renewable source.
GOAL	Increasing our photovoltaic systems to generate 7% of the total energy consumed through a renewable energy source.

OBJECTIVE 3

OBJECTIVE	Reducing environmental impact caused by the company's activities. Reduction in the consumption of chemical products.
GOAL	Reducing by 5% the amount of reagents used during the neutralization process of the industrial wastewater treatment plant by implementing an automatic system to monitor flows.

OBJECTIVE 4

OBJECTIVE	Reduction in the hazardous nature of chemical products.
GOAL	Replacing the product used to deplate racks with a less hazardous one.
