

## Innovations presented by Televes cause great impact at international ANGA Cable 2012

**Santiago de Compostela, 26th June 2012.** The innovative solutions presented by Televes at the [ANGA Cable 2012](#) fair were warmly welcomed by the professionals who attended the event, a true benchmark in the German telecommunications sector, clearly marked this year by its largest international participation to date.

Just as in previous years, Televes had a stand in the preferred European manufacturers area, where the presentation of the **T.OX** headend caused great interest. The T.OX is well known in the market for their efficiency in terms of energy consumption per service distributed, and this time the X concept of universal transmodulation was powerfully exhibited on a mosaic of large screens, where visitors enjoyed the exclusive presentation of live 3DTV services transmodulated from DVB-S2 to DVB-C2.

ANGA Cable 2012 was also an exceptional stage for the *official presentation* of the new generation of portable field meters with digital Televes processing: the **H60**. This new model incorporates a larger screen, with higher resolution and contrast, while maintaining all the speed and mathematical precision of its exclusive Digital Processing algorithm, capable of capturing all possible spectrum parameters real-time. The professionals who tested this equipment valued the fact that its features make telecommunications installers' work much easier and reliable.

The Televes stand also reserved a significant space for the presentation of the complete range of solutions developed by the company to tackle the technical implications involved in the deployment of the **LTE** services.

### An essential appointment with clients and distributors

Manuel Martínez, Sales General Manager of Televes Corporation, pointed out that "ANGA Cable is once again the perfect annual scenario for the presentation of the results of our activity in technological development. For us, this event in Germany is a key meeting point with our clients and international distribution channels. This year we have been especially congratulated for being the only company that has presented a complete range of products prepared for LTE, an evolving technological scenario, where professionals trust Televes' experience and capacity for product development to take on this challenge successfully".
