

The new edition of the most important sector meeting in the Middle East,  
Africa and South Asia will take place March 12-14

## Televes Corporation will display its technological development capacity in CABSAT 2013

**Santiago de Compostela, 6 march 2013.** Televes will once again participate as an exhibitor in [CABSAT](#), the main event for the digital industry in the Middle East, Africa and South of Asia. For this edition the company will provide strong arguments for its capacity in technological development beyond its core traditional business, transmission and distribution of radiotelevision signals, making a clear case for other niche markets with ample reach, such as IPTV, or digital applications targeted for the security and healthcare environments (*Digital Hospital*).

Within that context **Televes** will present the new generation of the H60 field spectrum analyser series, LTE Ready and featuring remote control and measuring capabilities. It is the newest release of the first portable meter that incorporated *Digital Processing* to allow maximum performance for professional installers.

Televes will also present the latest release of the CoaxData generation, the solution developed as a high speed connection access to internet and TV services using the existing building cabling infrastructure. For CABSAT the product will reveal visitors speeds of up to 1Gb for 1.012 coaxial access outlets.

The stand will also display products and solutions of other Televes Corporation firms that are references in their respective markets. It is the case of **Tredess**, revealing video supervision over IP solutions, with *CWS Watermarking* and *Real-Time Location (RTLS)*. The company will unveil *Medicare*, the taylor made solution for the healthcare sector that will allow medical services, communications and audiovisual entertainment to be integrated in a terminal for the patient.

**Arantia**, on the other hand, will present the Chronos STB set-top box, with augmented Flash and RAM memory to offer greater agility navigating through IP-provided television channels. It will also release a new solution for Digital Signage, completely flexible for user requirements and demands.

"CABSAT is the key meeting point for agents and stakeholders of our markets in the region, and hence, it offers Televes Corporation the ideal occasion to present technological novelties developed under our different subsidiary companies. As a reference worldwide, our multinational firm has a continuous flow of product releases and CABSAT offers an outstanding platform for us. It is an event that has always worked wonderfully from a commercial standpoint. We trust it will continue being so in the future", commented Mr. David Goldar, general manager of Televes Middle East.

CABSAT will take place in Dubai between March 12-14th.
