

## Televés to present its vision of the Connected Home at ANGACOM 2013

**Santiago de Compostela, 28 May 2013.** For another year running, Televés will take part in [ANGACOM](#) (former ANGA Cable), the true European reference for *Broadband*, *Cable* and *Satellite* sectors in Europa, taking place between the 4-6th of June in Cologne (Germany). This time, the Company will present its vision of the future Connected Home, consisting of a state-of-the-art central console system controlling a full array of services that can be moduled to the needs of the home user. Special attention will be given to the innovative Proactive Socio-Medical Prevention application, peace of mind for those with loved elders living independently.

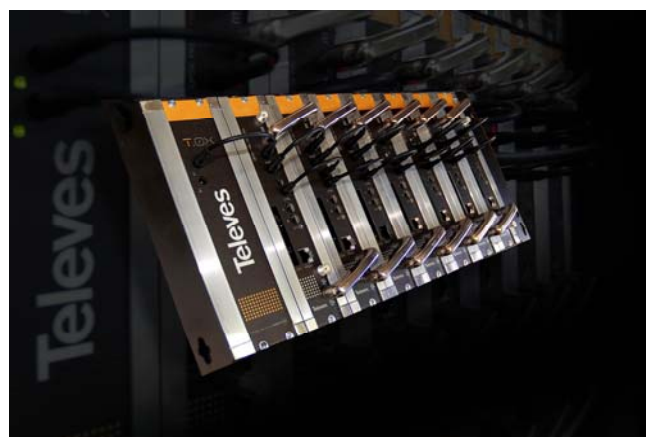

Televés will also show the newest product and solution releases, all oriented to the professional installer of TV and broadband services, as well as the content and network operators.

Thus, visitors of the Company's booth will have the chance to explore firsthand the new **H30** handheld field spectrum analyzer, the perfect combination of size and functionality for a certified installation, and the new modules of Televés' hallmark headend **T.OX**. These modules have been launched for remultiplexing services and for trasnmodulating DVBS2 and DVBT2 services.

With its participation in ANGACOM, Televés will show it is the best one-stop-shop manufacturer for all signal capture and distribution of satellite, terrestrial and cable services.
