

Televes will present the new NevoSwitch range at ANGACOM

Santiago de Compostela, 4th June 2015. The new NevoSwitch range of multiswitches, splitters and line amplifiers will be the key product release to be presented by Televes in [ANGCOM 2015](#), that will take place in Cologne, Germany from **9 to 11 of June**. The next generation of networks, the connected home and the personalized television will be among the topics of discussion in this meeting, true benchmark in Europe for Broadband, Cable and Satellite sectors. Some 17,000 trade visitors from around the world will attend the show, featuring 450 exhibitors.

Televes will be at **Hall 10.2 stand D21**, where the benefits of the quality production involved in the creation of the NevoSwitch line will be shown. Fully developed and manufactured by Televes in its own facilities, the full line is comprised of multiswitches, taps, splitters and line amplifiers for IRS installations for either star or cascade topology. *Quad compatible* references available, they can be configured as stand alone, or powered by a receiver. Thanks to its ECO mode, the consumption decreases as the number of users is reduced.

The company will also present the new **FiberData** solutions for RfoG hybrid broadband and GPON networks, developed to meet the needs of cable operators involved in extending fiber optic networks to the end user.

Strategic attention will also be shared with **IPTV** solutions for the **Hospitality** sectors and the new encoders for the **T.OX** distribution head-ends, well known and appreciated in international markets for their manufacturing quality, reliability and efficiency in terms of energy consumption per distributed service.

Also available will be the full range of **H series meters**, first to incorporate digital processing in portable formats. The new models, like H30API -that has been developed for cable networks and provides remote control-, stand out for their size, ease of use and accuracy.

"Our goal in ANGACOM 2015 is to inspire our customers, as well as to show operators, distributors and installers that the ability to develop technology, our passion for manufacturing excellence and customer proximity make Televes the ideal partner", said Matthias Dienst, Country Manager of Televes Germany.

About Televes

Televes is a leading global company focusing on the design, development and manufacture of systems and products associated with telecommunications services for the home, and specialising in reception and broadcast of television signals. The company's headquarters are located in Santiago de Compostela (Spain), where the company was founded in 1958. At present, Televes is the head of a Corporation formed by 21 subsidiaries (technological, industrial or commercial), near 700 employees and 53 invention patents.

Televes has ten international subsidiaries in Portugal, France, UK, Italy, Germany, Poland, Russia, UAE, China and USA, and distributes its products to more than one hundred countries on five continents through an extensive network of distributors. Throughout its 55 years of experience, Televes has launched more than 1,500 different products, an achievement that is understood from the company's real passion for manufacturing. The company produces at its own facilities to ensure the highest quality. To achieve this, it has been a pioneer in the implementation of automated robotised lines and has its own testing and quality control laboratories. Therefore, the brand's products proudly display the "European Technology Made in Europe" stamp.
